suki60

barcelona, spain

+34 658 574 658

[SKILLS]

LANGUAGES & RUNTIMES

html/css, javascript, typescript, node.js, python, ruby

LIBRARIES & FRAMEWORKS

react, next.js, react router v7, tailwind css, zod, zustand

TESTING & TOOLING

vitest, react testing library, playwright, vite, turborepo, biome

DATA & APIS

postgresql, pgvector, redis, neon, graphql, rest apis

CLOUD & DEVOPS

aws, vercel, ci/cd (github actions), docker, datadog, sentry

AI & AGENTS

ai agents, llm apps, rag, mcp, evals, openai agents sdk

[EDUCATION]

java web developer bootcamp

ubiqum / 2017

learned the fundamentals of web dev (html, css, js) with java as backend

mechanical engineering degree

eseiaat / 2013 - 2016

core engineering, mechanics and product design fundamentals

[LANGUAGES]

catalan	NATIVE
spanish	NATIVE
english	FLUENT
japanese	BASIC

[PROFILE]

i have always been a builder at heart, which naturally drew me to study mechanical engineering. 8 years ago, i took my passion for building into the digital realm to become a software engineer. the vibrant tech community and the endless possibilities of software have kept me hooked ever since. today, i'm combining my engineering mindset with the superpowers of ai to push the boundaries of what i can build with code.

[EXPERIENCE]

ai engineer

2026

independent (sabbatical year) / barcelona & japan

- built offwik, a pwa that turns the phone into an offline rag agent over 238k wikipedia articles: webgpu llm and vector search, no server. plus other ai agents
- 560+ hours, 14 master.dev learning paths completed: ai engineering, coding with ai, computer science, code architecture, cloud & devops, design to code...
- cycled 3,200+ km across japan, solo, self-planned route

senior software engineer

2024 - 2025

gartner / barcelona

- architected and led the next.js app router migration of capterra.com (server components, server actions, caching strategy), setting the standard for future work
- owned ci/cd and deployment strategy (github actions, vercel), including auth (cognito) and e2e coverage (playwright) — on-call for incident response
- onboarded and mentored 6-8 engineers into the team, providing hands-on support and technical guidance

software engineer

2022 - 2024

gartner / barcelona

- led the rollout of my hackathon-winning project: rebuilt getapp.com category filters from full page reloads into an instant spa, improving page speed and lead conversion
- consolidated capterra.com microfrontends into a single turborepo monorepo and moved hosting from aws to vercel, removing duplicated infra and per-app deploy pipelines
- owned observability and analytics setup (datadog/sentry), partnering closely with data analysts on gtm/ga event tracking

junior software engineer

2018 - 2022

gartner / barcelona

- built and managed sem landing pages driving +10m eur/year revenue
- led a successful initiative to build a library embedding react into ruby templates — deep webpack/react work for single-instance loading and no repeated components
- first official frontend engineer at the company — the team later grew to 3 to migrate getapp.com from jquery to react

trainee software engineer

2018

gartner / barcelona

- completed 6 months of intensive tech training at the company
- contributed full-stack to getapp.com: search indexing (solr/mysql), ruby, jquery
- offered a permanent contract, one of 3 kept from 6 trainees

mechanical engineer

2017

demola project / tampere

- designed a specialized drone capable of taking soil samples
- modeled structure and internal mechanisms with solidworks
- won 2nd place out of 30 projects at demola spring 2017
